SUMMARY

Backend engineer with 14+ years of experience building distributed systems in Kotlin, Java and Go, mostly in banking and fintech. Built payment, messaging and data-processing services at production scale (1,000+ mobile payments per hour, 30+ messages per second, ~20k documents per day), migrated 100+ services to Google Cloud, and contributed to a new programming language and its developer tooling. Led teams of up to 18 engineers.

SKILLS

Languages	Kotlin, Java, Go, TypeScript
Backend	Spring Boot, JPA / Hibernate, JDBC, Microservices, REST, GraphQL, Asynchronous Processing
Systems	Distributed Systems, Event-Driven Architecture, Low-Latency Systems, System Design, Algorithms & Data Structures, DSL & Compiler Design
Data & Messaging	Kafka, GCP Pub/Sub, Google Spanner, Oracle, PL/SQL, PostgreSQL, MSSQL, MongoDB, Elasticsearch, Liquibase
Cloud & DevOps	GCP, Kubernetes, Docker, Helm, Nginx, Maven, CI/CD, GitHub Actions, Observability
Security	OAuth2, API Security, IAM
Practices	Code Reviews, Testing (JUnit, Mockito, test automation), Performance Profiling, Mentoring, Scrum

EXPERIENCE

Lead Senior Software Engineer — BLP Digital — Feb 2026 – Aug 2026
Zurich, Switzerland

- Led the analytics project across 3 teams, covering ~10 Go and Python services.
- Designed data processing pipelines that ingest ~20k documents per day.
- Increased the amount of detailed data collected by 50% on the same infrastructure through architectural changes to the pipelines.

Tech: Go, Python, PostgreSQL, Kubernetes, React, CI/CD, GitHub Actions, document processing, algebraic data types, functional programming

Lead Senior Software Engineer — Noumena Digital AG — Feb 2025 – Feb 2026
Zug, Switzerland

- Core contributor to NPL (Noumena Protocol Language), a new programming language for off-chain smart-contract logic, from language design through compiler, LSP and IDE tooling.
- Built and open-sourced the NPL CLI, used by ~100 developers (github.com/NoumenaDigital/npl-cli); together with the LSP and IDE plugins it lets developers run the whole NPL workflow from their usual IDE and terminal.
- Contributed to the platform authorization model and multi-tenant architecture serving 5 tenants.
- Developed a distributed digital asset platform integrated with the Stellar blockchain.
- Built an MCP server that exposes platform capabilities to AI agents.

Tech: Kotlin, compiler & DSL design, LSP, MCP, JetBrains and VS Code plugins, OAuth2, IAM, asynchronous processing, React, CI/CD, GitHub Actions

Senior Software Engineer — Swissquote Bank SA Mar 2022 – Feb 2025

Gland, Switzerland

- Built backend services for the mobile payment gateway that processes all of the bank's mobile payments (1,000+ per hour).
- Automated customer onboarding with multi-provider KYC/AML document-recognition integrations, cutting onboarding time from days to minutes and reducing manual identity checks by support agents.
- Integrated an AI chat assistant into the flagship banking app, reducing support workload by 20%; built a portal for support agents.
- Re-architected the white-label eBanking configuration platform; 20+ white-label clients migrated to it.
- Mentored an offshore team of 5–7 engineers, one of whom grew from junior to senior.

Tech: Java, Spring, JPA / Hibernate, JDBC, Oracle, PL/SQL, Liquibase, Elasticsearch, Maven, JUnit, Mockito, OAuth2, IAM, asynchronous processing, performance profiling, Kubernetes, Nginx, React, CI/CD, SCS architecture, LLM integration

Senior Software Engineer — Prosper Funding LLC Apr 2019 – Mar 2022

- Led an engineering team of up to 18 people as Scrum Master; improved communication and transparency across 3 cross-functional teams.
- Migrated 100+ services to Google Cloud Platform and built a tool for smooth data migration from on-premise databases to GCP; moved databases from MSSQL to Google Spanner.
- Worked in the verification team on KYC and validation of loan applications, contributing to 24% growth in loan origination.
- Designed an asynchronous messaging gateway for email, SMS and push, handling 30+ messages per second.
- Architected a high-concurrency User Consent & Preference system that cut customer complaints by 20% and stopped unsolicited communications.
- Built an internal Kotlin DSL that made communication-consent rules readable for the legal team.
- Introduced GraphQL federation across microservices.

Tech: Kotlin, Java, Spring Boot, JPA / Hibernate, JDBC, Oracle, PL/SQL, PostgreSQL, Elasticsearch, Liquibase, Maven, JUnit, Mockito, GraphQL, GCP, Pub/Sub, Spanner, Kubernetes, Helm, OAuth2, IAM, low-latency services, performance profiling, Ruby on Rails

Lead Software Engineer — EPAM Systems Dec 2018 – Apr 2019

- Led a Big Data team of 7 engineers building scalable ingestion pipelines for document processing.

Tech: Kotlin, Scala, AWS

Senior Software Engineer — T-Systems CIS Nov 2011 – Dec 2018

- Built a cloud billing system for high-load workloads at Deutsche Telekom Cloud.
- Delivered the billing integration with VDV (Association of German Transport Companies), which contributed to regional revenue growth.
- Built a system test automation framework.
- Progressed from Test Engineer to Senior Developer; awarded "Person of the Year".

Tech: Java, Spring, Spring Boot, JPA / Hibernate, JDBC, Oracle, PL/SQL, Liquibase, Maven, JUnit, Mockito, Kafka, MongoDB, KillBill, Angular, SOAP, WS-Security, performance profiling

EDUCATION

M.Sc. Computer Science — St. Petersburg State Polytechnic University

B.Sc. Computer Science — St. Petersburg State Polytechnic University

Certification: ISTQB

LANGUAGES

English (C1), German (B1), Russian (native)
